

Zackarin Necesito

Houston, TX | zacknecesito@gmail.com | (443)-838-7061 | [LinkedIn Profile URL]

Technical Skills

- **Languages & Automation:** Python, Shell (Bash), Playwright, GenAI Orchestration (Gemini CLI)
- **Cloud & Infrastructure:** AWS (EC2, S3, RDS, CloudWatch, CloudFormation, CodeCommit), Hybrid Cloud
- **CI/CD & Configuration:** Jenkins, Azure DevOps, Git, Ansible, Terraform, YAML
- **Observability & Data:** Grafana, Oracle SQL, Splunk, PostgreSQL, MySQL
- **Operating Systems & Web Servers:** Linux (RHEL), Windows Server, Apache Tomcat, IIS

Professional Experience

JPMorgan Chase & Co.

Site Reliability Engineer – Risk Corporate Technology | *Houston, TX* | **2022 – Present**

- **GenAI / Incident Response Automation:** Engineered a custom internal LLM skill using Gemini CLI to interface with core Logviewer APIs; automated log analysis across hundreds of pages to isolate long-tail execution errors, reducing Mean Time to Resolution (MTTR) and cross-regional escalations by up to 2 hours per incident.
- **Automated Observability:** Developed a Playwright-driven browser automation agent via Gemini CLI to actively scrape and monitor critical batch node HTML states across 12 distinct Production Workflow Servers (WFS), routing real-time anomaly alerts directly to Microsoft Teams channels.
- **Unified Monitoring Architecture:** Built central Grafana dashboards leveraging a read-only Oracle production instance to synthesize complex batch context key statuses, replacing manual inspections of 12 separate UI endpoints with a unified "one-look" status map; engineered a synchronized Outlook mobile alerting framework for on-call visibility.
- **Disaster Recovery (DR) Orchestration:** Spearheaded critical infrastructure validation during quarterly, time-sensitive mandatory DR drills; developed automated Bash scripts to audit read/write status of active/passive filers, cutting down manual verification times by 100% and eliminating human error.
- **Compliance & Risk Mitigation:** Built a version-control audit script to programmatically verify Git tags and software versions across all WFS environments; eliminated high-risk manual host logins during deployments while establishing a historical ledger to accelerate system rollbacks.
- **Toil Reduction & Knowledge Management:** Authored a comprehensive Confluence runbook library to standardize manual workarounds between release cycles; authored Python scripts to automate complex, high-risk production cache renaming procedures.

AMC Networks (HIDIVE)

DevOps Engineer | *Houston, TX* | **July 2021 – 2022**

- **DDoS Remediation & Infrastructure Security:** Rapidly deployed critical CloudFront firewall rules during active DDoS attacks, successfully shielding infrastructure, stabilizing application availability, and safeguarding service delivery for over 100,000 paid active streaming subscribers.
- **CI/CD Pipeline & Workspace Optimization:** Architected and maintained automated deployment pipelines within Azure DevOps; authored an automated Git lifecycle script to programmatically purge stale development branches within customizable time windows, transforming 2 hours of manual repository upkeep into a 5-minute automated task.

Tata Consulting Services (GE Account)

Cloud Engineer | *Houston, TX* | **Aug 2019 – July 2021**

- **Infrastructure Recovery & System Administration:** Developed and executed low-level Linux recovery strategies to restore broken SSH access on compromised EC2 instances by detached/reattaching volumes and rebuilding authorization files via root privilege management.
- **Configuration Management:** Utilized Ansible to enforce configuration consistency across a cluster of 80+ EC2 nodes within a core VPC, successfully mitigating configuration drift and cutting down manual system provisioning times.
- **Continuous Integration:** Maintained multi-stage Jenkins pipelines to automate application deployments across various testing and staging environments.

PROJECTS

Full-Stack IG-Wrapped | <https://ig-wrapped-theta.vercel.app/wrapped> | <https://github.com/znecesito/ig-wrapped/>

- Engineered a cloud-native web app that updates itself when you push code (Vercel + Render) and tests builds on every PR.
- Built the core architecture using NodeJS, Vercel, and Render with a Privacy-first design: your export is processed in your browser, not stored on our servers for the Wrapped flow.

Education

University of Texas at San Antonio

- *Bachelor of Science in Computer Science* (GPA: 3.11)
- **Core Focus:** Algorithms, Data Structures, Cloud Computing, Operating Systems, Advanced Linux
